We offer many solutions to help a variety of concerns and we have an extensive range of in-house skin rejuvenation treatments that can revitalise your skin and restore your healthy, youthful glow.

To ensure we create a unique treatment plan to deliver the best outcomes for you, we always recommend initially having a complimentary session using the Obagi OBSERV 520x, an advanced skin analysis system.

The OBSERV 520x provides an accurate diagnosis of skin conditions at both the epidermal and dermal layer. There are 10 different observation modes which are used to completely analyse your skin health at all layers of the skin. This in-depth review of the skin allows both you and our specialists to be informed about your skin health and be aware

of any irregularities that may be present. Following this, any necessary treatment can be recommended and discussed to best return the skin to a healthy balance. We also use the OBSERV 520x to see how different treatments are benefitting the skin via follow up observations.

For an initial investment of £50, we offer a more in-depth consultation which is carried out by one of our nurse practitioners. They will discuss with you your current skin care regime, lifestyle habits, previous treatments as well as your skin care concerns and goals. After analysing your skin and consolidating all the information provided, a bespoke treatment plan and product regime will be suggested to help ascertain your skin care goals. **The cost of the initial consultation is redeemable against any treatment.**
